- Responsive Web Design
- Phone Gap
- Appcelerator Titanium and Sencha

iOS

- Enterprise Applications
- Audio, Video & Image Processing
- Mobile Commerce
- Systems Integration

Portfolio – Mobility

Calamity Gym

Calamity Gym is a mobile fitness network that unites the fitness community with a world in need. The workouts can be accessed via smart phone, tablet, computer or TV, with a global fitness community.

We have built a web application with responsive design, Android Native Application and iOS Native Application for this project.

Portfolio – Mobility

WiseCard

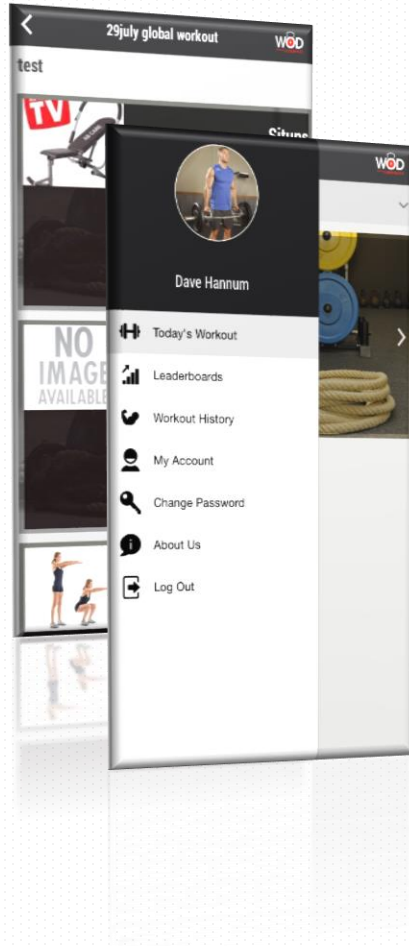

WiseCard is a iOS native application built with an objective to share the visiting cards electronically. Its has the feature to scan the card and store the contact details to the DB.

We have built a iOS Native Application for this project as per the requirement.

Portfolio – Mobility

WodOnDemand

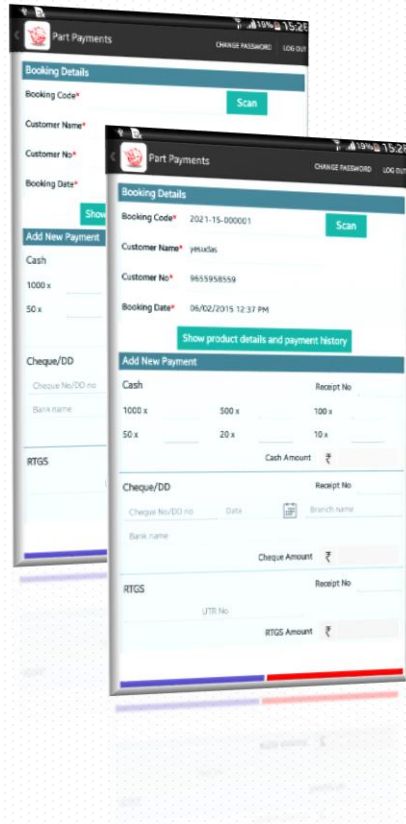

WodOnDemand is a multi tenant application which serves as an interface for the trainers to provide fitness training to their customers. The customers can use the mobile native applications in iOS and Android devices to follow the instructions from the trainer. The workouts are also displayed in the Android wearable and Apple Watch.

We have built a web application with responsive design, Android Native Application, iOS Native Application and watch application based on Android and iOS for this project.

Portfolio – Mobility

SMMarines

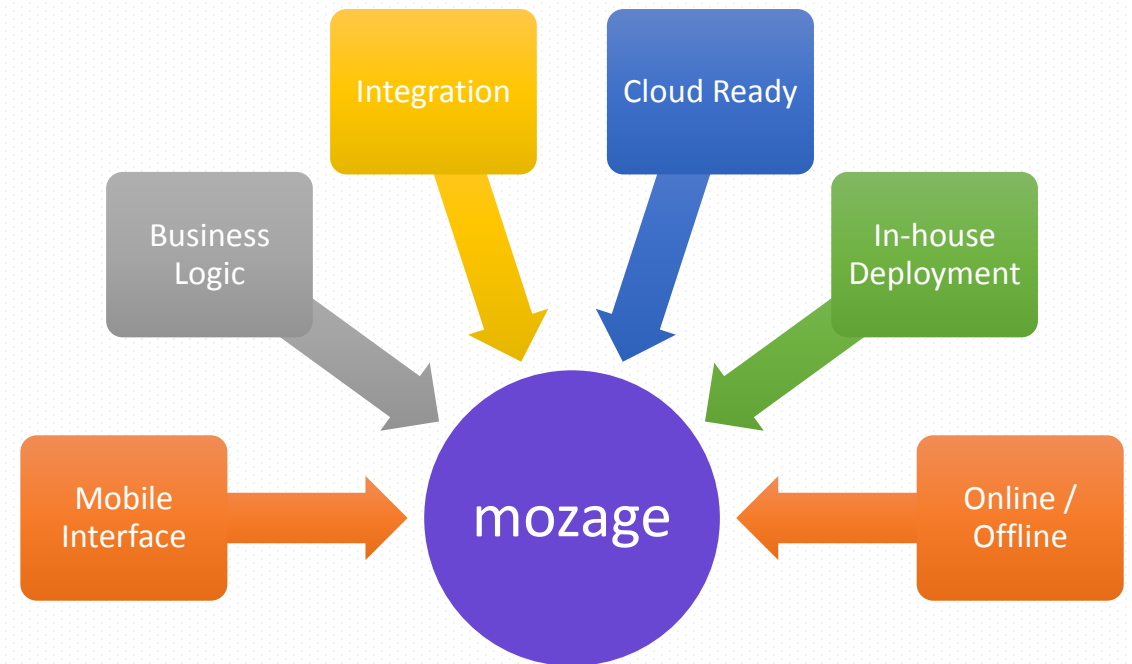

SM Marines application is as an intranet application which can help to track, maintain and sell the ship equipment. The web application will be the main source and the mobile applications will serve the field workers for entering information about the equipment and the sale details.

We have built a web application Android Native Application for this project.

Product Engineering
